The application has been amended as follows:

In the title:

The title has been changed to:

--Wellbore Drilling Method--

In the claims:

Claims 19-32 have been canceled.

Claim 1 has been replaced by:

1. A method for drilling at least two wellbores from an offsite location, each of the at least two wellbores located at a respective wellsite having a drilling rig with a downhole drilling tool suspended therefrom, comprising: selectively advancing each of the downhole drilling tools into the earth to form the at least two wellbores, the downhole drilling tools operated according to respective wellsite setups; collecting wellsite

parameters from a plurality of sensors positioned about the wellsites; transmitting at least a portion of the wellsite parameters from each of the wellsites to an offsite control center; performing an analysis of the wellsite parameters from each of the wellsites, wherein the analysis of the wellsite parameters from each of the wellsites comprises: comparing the wellsite parameters from each of the wellsites to the respective wellsite setup to determine any deviation from the wellsite setup; and combining and comparing the wellsite parameters from each of the wellsites for synergistic analysis of the wellbore parameters; and transmitting a command from the offsite control center to a transceiver positioned at each of the wellsites, wherein the command alters a trajectory of the downhole drilling tool and is based on the analysis of the wellsite parameters.

Claim 33 has been replaced by:

33. A method for drilling at least two wellbores at a respective wellsite from an offsite location, comprising: selectively operating at least two drilling tools according to a wellsite setup to form the at least two wellbores; collecting wellsite parameters from a plurality of sensors positioned about at least two wellsites; selectively adjusting each wellsite setup at the wellsite via a wellsite control unit; transmitting at least a portion of the wellsite parameters from each of the wellsites to an offsite control center; comparing each of the wellsite parameters from each of the wellsites to the respective wellsite setup to determine any deviation from the wellsite setup; combining and comparing the wellsite parameters from each of the wellsites for synergistic analysis of the wellbore

parameters; and transmitting a command to automatically adjust drilling operation of the drilling tool positioned at each of the wellsites from the offsite control center based on an analysis of the wellsite parameters at the offsite control center.

Claim 36 has been replaced by:

36. A method for drilling at least two wellbores from an offsite location, each of the at least two wellbores located at a respective wellsite having a drilling rig with a downhole drilling tool suspended therefrom, comprising: selectively advancing each of the downhole drilling tools into the earth to form the at least two wellbores, the downhole drilling tools operated according to respective wellsite setups; collecting wellsite parameters from a plurality of sensors positioned at or within a first wellbore and a second wellbore; transmitting at least a portion of the wellsite parameters from each of the wellsites to an offsite control center, the wellsite parameters including information related to the first wellbore and the second wellbore; performing an analysis of the wellsite parameters from each of the wellsites, wherein the analysis of the wellsite parameters from each of the wellsites comprises: comparing the wellsite parameters from each of the wellsites to the respective wellsite setup to determine any deviation from the wellsite setup; and combining and comparing the wellsite parameters from each of the wellsites for synergistic analysis of the wellbore parameters; determining a drilling command at the offsite control center in response to each of the wellsite parameters; transmitting the drilling command from the offsite control center to a

surface control unit at each of the wellsites; automatically transmitting the drilling command from the surface control unit to the downhole drilling tools; and implementing the drilling command at the respective downhole drilling tools.
